About Trazmedia

Trazmedia is a Yogyakarta-based software house founded in 2017. We design, build, and ship production web platforms and digital products for businesses across Indonesia and beyond.

We specialize in modern web and mobile development with an emphasis on engineering quality, clean architecture, and outcomes that are easy to operate after launch.

Core capabilities

- Web platforms: landing pages, company profiles, web apps, and e-commerce systems.
- Mobile apps: intuitive iOS and Android experiences for local, SMB, and enterprise use cases.
- Full-stack systems: APIs, admin dashboards, reseller systems, booking, inventory, and POS.
- Delivery model: discovery, milestone-based builds, testing, deployment, and post-launch support.

Tech stack

React, Next.js, Astro, Laravel, TypeScript, Tailwind CSS, Inertia.js, Supabase, PostgreSQL, MySQL, Filament, Midtrans, Vercel, and more.

How We Work

We structure most engagements around a lightweight discovery stage followed by a milestone-based build. A named technical lead owns delivery and keeps the client Product Owner aligned on priorities, acceptance, and technical tradeoffs.

We routinely deliver in client-controlled repositories and cloud environments. The client owns the source code, data, design files, and cloud assets after delivery.

English documentation, status updates, and plain-language technical explanations are part of our standard workflow.

Selected Work

The following projects are representative of production platforms we have delivered with multi-role access, admin workflows, operational complexity, and ongoing support.

Gojamu Reseller

Role-based reseller management with admin/reseller dashboards, product master data, warehouse and inventory management, price tiers, rewards, and stock tracking.

Tech: Laravel, Inertia.js, React 19, TypeScript, Tailwind v4

Suntree

Cohort-based online learning platform connecting students with verified teachers. Includes batch-based programs, payment confirmation, and administrative workflows.

Tech: Laravel, Inertia.js, React 19, TypeScript, Tailwind v4

EziTour

End-to-end tour booking platform with public catalog, checkout, Midtrans payment, traveler dashboard, and Filament admin panel.

Tech: Laravel 12, Filament, Midtrans, MySQL

VaporPOS

Modern POS and inventory management system built for UMKM and retail operations, deployed for daily use with transaction tracking and stock management.

Tech: React, TypeScript, Express.js, Supabase, PostgreSQL

Why Trazmedia for Katalis

Trazmedia is well suited to support Katalis Ekosistem Nusantara on Phase 1 of the social engagement platform. The work maps closely to systems we already build: membership spaces, role-based access, program activity tracking, contribution recording, admin workflows, and deployment-ready web architecture.

We can supply senior technical leadership, full-stack delivery, QA review, and deployment security support - with clear ownership and a single point of contact for the Product Owner.

We are comfortable working under client-managed repositories and cloud infrastructure, and we are happy to transfer full ownership of source code, data, design files, and cloud accounts on delivery.

Contact

If this profile fits what you need, we are happy to share our full portfolio page and schedule a short intro call before the application deadline.
